Enterprise Reporting & Automation Strategy Using Microsoft Tools

1. Introduction

RetailHub Pvt Ltd is a retail and e-commerce company operating multiple stores and an online platform. The organization handles large volumes of data from sales, inventory, customers, and finance systems. Currently, reporting is manual and time-consuming, which affects efficiency and decision-making. A modern approach using Microsoft tools can improve reporting and automate workflows.

2. Problems Identified

1. Sales reports are shared manually through spreadsheets.
2. Finance reports are prepared manually every month.
3. Lack of real-time data visibility.
4. Data is scattered across multiple systems.
5. Workflow processes are slow and inefficient.

3. Proposed Solution

Power BI:
Power BI will be used to create interactive dashboards for sales, inventory, and finance. It enables real-time insights and better decision-making.

SSRS:
SSRS will generate structured reports such as daily sales reports and monthly financial reports. These reports can be scheduled and exported.

Power Automate:
Power Automate will automate tasks like sending reports, alerts, and approval workflows.

Power Apps:
Power Apps will be used to build simple applications such as stock request forms and approval systems.

SQL Server / Azure SQL:
A centralized database will store all business data and support reporting tools.

4. Architecture

Data from sales, inventory, and finance systems will be stored in a centralized SQL database. Power BI and SSRS will use this data for reporting, while Power Automate will handle workflows and automation.

5. Benefits

1. Saves time by reducing manual work.
2. Improves accuracy by minimizing errors.
3. Provides real-time insights.
4. Enhances decision-making.
5. Improves operational efficiency.
6. Enables automation of repetitive tasks.

6. Conclusion

Using Microsoft tools such as Power BI, SSRS, Power Automate, and Power Apps, RetailHub can improve its reporting and automate processes. This will lead to better efficiency, reduced errors, and improved business performance.
