

Azure VM Scale Set Hands-On – Step by Step Solution

1. Create Resource Group

Open Azure portal → Search 'Resource groups' → Click Create → Subscription: Free Trial → Name: GL-VMSS-RG → Click Review + Create → Create.

2. Create Virtual Machine Scale Set

Search 'Virtual Machine Scale Sets' → Click Create → Select resource group GL-VMSS-RG → Choose Ubuntu 20.04 → Authentication: SSH → Username: azureuser → Generate key pair → Next.

3. Configure Networking

Use default virtual network → Enable Load Balancer → Create new backend pool → Proceed.

4. Configure Scaling

Set initial instances = 2 → Min = 2 → Max = 5 → Scaling policy = Custom.

5. Enable Health Monitoring

Enable application health monitoring → Protocol: HTTP → Port: 80 → Path: /health.html.

6. Add Custom Script

Add bootstrap script to install app, download files, and run Python application.

7. Create Firewall Rules

Add inbound rules:

- Port 80 (HTTP)
- Port 22 (SSH)

8. Access Application

Go to Load Balancer → Copy Public IP → Paste in browser → App loads.

9. Delete Resources

Go to Resource Group → Delete GL-VMSS-RG to avoid charges.
